Track NOTES:

- When wheels are used with deeper flanges - see **STANDARD S-3.3**.
- The F limit applies only to the wing rail, and the C limit applies only to the guard rail. Both apply to the same rail only in special work such as a crossing.
- For a full discussion of minimum radius, minimum turnout and radius equivalents of degrees of curvature, etc., see **RP-7** and **RP-11**.
- Guard and wing rails shall be flared to a minimum dimension across the flared flangeway end of $1.5 \times F_{max}$. Flare angle shall not exceed 10 degrees, and the Flare must disappear before reaching the working area of its rail.
- These track dimensions are more restrictive with Gmax for guarded trackwork, for general track - see STANDARD S-3.1.**
- Metric measurements are found on page 2.**
- Please see S-4.2 and RP-25 Wheel Contour for the appropriate wheel profile.
- O-scale frog flangeway (F) is recommended with a target for code 145 wheels at 0.071".

Track NOTES:

- 1) The term "LS" for "Large Scales" standards covers all common commercial scales running on LS 45mm gauge track (1:32, 1:29, 1:24, 1:22.5, and 1:20.3) without regard as to whether the trains are standard or narrow gauge.
- 2) Due to the inherent nature of large scale trains, the wheel and track standards for "Standard" (S-x.2) and "Deep Flange" (S-x.3) are identical except in terms of flange width and depth, thus the track H depth also is changed.
- 3) With regard to 1:20.3 (also designated "F" scale), trains built to that scale running on LS 45mm gauge track are also classified Fn3. Standards for Fn3 track and wheels are identical to those for LS, with exception given to more specific targets given for tread width and flange depth. Track standards for Fn3 are to be identical to those used for LS 45mm gauge.
